

# ***Hathorn Locator***

Can be used to locate pinches and blocks in non-pressurized conduits and pipes. Sonde frequencies are matched to the frequency of the receiver. Sondes at all frequencies will trace through conduit up to 20 feet in the air or 8 feet in cast iron. Simple to operate, the ergonomically designed and balanced receiver pinpoints inspection cameras, and Sondes in nonmetallic conduits in a peak mode. A large backlit digital display provides both relative and actual signal strength while a variable tone pitch gives an audio indication to the signal. The triple antennae configuration provides push-button depth accurate up to 15 feet and works in a peak, pin-point peak and null modes when used with a transmitter. Whether locating water lines, sewer lines, inspection cameras, or Sondes, this is an economical and dependable locator for companies of all sizes.

#10130

## ***Key Features***

- Backlit digital display for low-light reading
- 512 Hz
- Push button depth up to 25 feet
- Locate Sondes up to 25 feet
- Weather proof membrane buttons
- Made in the U.S.A.
- Catalogue #10130

## ***Locator Specifications***
